customers all over the world. These rigs have a variety of uses, including water well, geothermal, environmental, probing, pavement coring, and more. At SIMCO®, their engineers and field representatives look at all aspects of what it

takes to build, sell, and support a top-of-the-line, dependable drill rig that does what the customer bought it for.

SIMCO® began development of hydraulic drill rigs in 1969. The business was quickly moved to a new facility in Osceola, Iowa, as their first hydraulic auger rig, the crawler-mounted 3000TR, began deliveries. Soon, the model 2400SK, designed to be mounted in a pickup or trailer, was added to the product line. In the mid-70s as hydrostatic pumps became available to the market, the model 2800 HS was added to SIMCO®'s line. The size and power available to the rig gave added capability in the form of mud rotary drilling. The next development was the model 5000, a rig capable of drilling water wells up to 1000 feet* deep.

An early-model 5000.

The first ten years brought growth in the size of the business and the range of equipment offered, as well as advances in available hydraulic components as SIMCO® engineering continued to push suppliers for more advances in technology. Many of the early SIMCO® models are still operating to this day.

SIMCO® was originally known as Southern Iowa Manufacturing, Inc. In 1994, as the SIMCO® name became a trademark, the company name was changed to SIMCO® Drilling Equipment, Inc. Their loyal customer base followed them in their growth over the years, making the company what it is today.

WorldWide Drilling Resource®

Today, SIMCO® has a variety of designs with advanced hydraulics available. The SIMCO® 7000 & 2800 models are offered in a high-torque geotechnical package or with air/mud rotary options, allowing for exceptional versatility to the end user. Each person at SIMCO® takes great pride in the quality of their work, knowing that taking care of a customer doesn't stop after they buy the

drill. They realize everyone has different needs, and they offer a list of services to cater to almost any customer, whether it be showing the new operator how to utilize their drill or helping the veteran with outstanding customer service. SIMCO® employees are the strength behind the brand and their workmanship shows in the products they deliver.

SIMCO 2800
Don't let its size fool you. This compact package has the power and performance of much bigger rigs. The engineered combination of field proven hydraulics, a high output mud pump/SIMCO PDQ drill rod system and an easy to use, low maintenance operation allow this rig to make money on jobs where most other rigs couldn't even dream of breaking even. Whether it is installing geothermal wells, drilling water wells or doing geotechnical drilling and soil sampling, the 2800 allows you to get in, get done, and get out- all at a fraction of the cost of using much bigger equipment.

SIMCO 7000
For bigger jobs, look to the SIMCO 7000 as the affordable choice. Engineered from the ground up, this rig incorporates many of the most popular and field proven features and options from previous SIMCO rigs. As a successor to the benchmark 5000 model, this rig raises the bar again in terms of reliability, serviceability and performance. A smooth operating and more powerful feed system combined with a state of the art, yet simple to use, rod handling system optimizes the driller's efforts and turns most any job into a profitable one.
